

### The Amazing Human Brain

Just like any fine, multi-functional computer, your brain requires all its elements to perform correctly and fluidly. It is entirely electro-chemical in nature, and scientists are increasingly concluding that the roots of many psychiatric illnesses and mental health problems might be found in brain dysfunction. This makes sense: a tiny piece of code can crash a fine computer, but with the right code reinstalled, the computer resumes normal operation. The same can be said of the brain. It needs proper nutrition, and when we feed the brain what it most needs, its best possible condition can be restored and maintained.

Investigators are examining children with ADHD (attention deficit/hyperactivity disorder) and adults with bipolar disorder and depression, along with a variety of other psychiatric conditions and cognitive impairments. Conditions such as Parkinson's, Alzheimer's, ALS (Lou Gehrig's disease), MS (multiple sclerosis) and MD (muscular dystrophy) all inhibit cell function and hinder the brain's responsiveness to stimuli.

Healthy mitochondria are vital for healthy aging. In normal aging, free radicals accumulate instead of being destroyed by the mitochondria. With the right nutrients, the mitochondria are triggered to destroy free radicals and burn energy. Brain energy metabolism is very important to normal brain function, so it's no surprise to find that this factor is reduced in Alzheimer's victims and other dementia patients: the greater the loss of energy, the more severe the dementia.

Ensuring optimal intake of key nutrients such as vitamins and antioxidants throughout one's lifetime may be an important wellness strategy to help prevent brain diseases and prevent the decline in our cognitive abilities. Approximately 6-8% of all persons aged 65+ have developed Alzheimer's disease, and the prevalence of this disease is increasing. Current research lends further support to the use of antioxidants and a vitamin-enriched daily dietary supplement program to help support the brain function as we age.

### Testimonials

*"NS has made a tremendous difference in memory, concentration and focus. I wasn't even aware of the dimming down of the mind until I started taking it. I haven't burnt the espresso pot since or had all the other memory lapses that were becoming a part of my life . . . I'm starting to see it in family and friends: lapses and confusion of thought. You were right, it is becoming a strange unrecognized epidemic, like the pain epidemic that now seems to be everywhere." — Nick*

*"I have experienced very good results with the Neurotransmitter Support; it has helped with my clarity and mental vigour." — Fred H.*

*"I own a health food store and I have MS, but it is not active. Neurotransmitter Support has made my mind much clearer than when I don't take it. It is hard to pin-point, but it made me feel more intuitive and have better concentration." — N.K*

*"I was in an accident that caused a head injury. I was trampled by a horse and the damage I received was 3 skull fractures and 3 brain bleeds. I was unconscious for 15 min and I don't have any memory from the first 4 days after my accident. I was in the ICU for 1 week and continued living at the hospital for 1 month in the rehabilitation section. I had a lot of trouble with short term memory, balance, dizziness and many other issues. I even had to learn how to walk again. I was stuck with a wheelchair and walkers to get around. I have an amazing family and they helped me every step of the way. Because of my family helping me and getting me 24/7 home care, I was able to get released from the hospital sooner than most people. As soon as I got home we started looking at natural ways to help speed up the healing. We got a bottle of the Life Choice Neurotransmitter Support from the health food store. Within a week I was starting to improve; and after taking a couple bottles, we could not believe how well I was doing. I'm now 6 months past my injury and the Neurologist can't believe how well I am doing. Most people take up to a year or longer to get back to normal. I was able to go back to work part time when I was only 3 months after the accident; and I am able to walk alone and drive a car again. This product really improved my health." — Carrie*

*"I am writing this letter to let you know how pleased I am with your product Neurotransmitter Support. I suffered from a severe concussion in 2002 in which I hit the back of my head on the ice. It took two years for me to come around and many problems with it. In 2007 I started to have mini-strokes and continued to have many of them which affected my speech and was unable to comprehend much on a daily basis. I was introduced to Neurotransmitter Support March 3, 2016 at Treat Yourself Wellness Centre in Sarnia, ON. I can honestly say that I have phenomenally improved. I no longer suffer with mini-strokes, my thoughts are much clearer and I am able to keep a full conversation going. This product has definitely saved my life. My new husband to be has seen a big improvement in me and that makes me very happy. Thank you so much for offering such a great product which I will be using for the rest of my life." — Sandy A.*

*"I am a 4th year student working towards my Bachelor of Science degree, majoring in biology to be a geneticist. I have dyslexia, which means everything is not right with the way my brains interprets. The synapses are slower, some groups of neurons are weaker, my memories seem altered and I feel as if my brain is often tired. Dyslexics use other areas of the brain not like non-dyslexic people for everyday functions, and medical doctors and neurologist understand that dyslexic's brain must work harder than non-dyslexics. This makes people with dyslexia more tired. I fell asleep during the day when studying and it makes things more difficult. It's very annoying. But if I take your product my brain feels like new and I don't fall asleep and I feel like myself not tired. It helps me a lot! I have tried ginkgo biloba and omega's (the concentration of these are very low in the blood of dyslectic people but the mind may needs them), but your amazing Neurotransmitter Support is so very effective for me like nothing else, thank you!" — Kinga H.*

*"I have eidetic memory and after taking Neurotransmitter Support I could recall the addresses of my old neighbors when I was a child, and I play difficult guitar chords and once I took Neurological Support every day for a week I could pick up complicated chord combinations with little or no effort." — Sandar F.*
