

DMSO Gel / Liquid (#DM3 / #DM4 / #DM8)

Medicinal Grade

Gel: NPN# 80039241

Liquid: NPN# 80039242

All-natural pain reliever. Helps temporarily reduce the pain of large joints, such as post traumatic soft tissue injuries, acute bursitis, strains, and sprains. Alleviates Reflex Sympathetic Dystrophy (RSD). Strengthens the immune system. Powerful detoxification.

Ingredients:

DMSO Gel: (dimethyl sulfoxide 99.9%) 90%; Aloe (organic aloe vera leaf gel) 10%

DMSO Liquid: (dimethyl sulfoxide 99.9%) 90%; Purified water 10%

100% Pure Pharmaceutical (medicinal) Grade, Vegan, Non-GMO & Animal Cruelty Free

Gel Dosage: Adults apply to affected areas as needed, best used sparingly, or as directed by your health care practitioner.

Liquid Dosage: Adults apply to affected areas as needed, best used sparingly, or as directed by your health care practitioner. To help temporarily reduce the pain associated with musculoskeletal conditions, apply 8ml - 12ml to affected area(s) three times daily, or as needed.

Caution / Risk Information

- When starting a DMSO regimen, we recommend starting with a smaller amount and gradually increasing the amount used. It is 99.9% medicinal grade, and purity is at 90% concentration. The liquid version is 10% purified water, and the gel version is 10% organic aloe vera; this is very potent and powerful medication.
- If the strength of 90% is too potent, we recommend diluting it with other topical all natural products at a 50:50 ratio to reduce the skin's sensitivity; we recommend our Recovery H Cream for soothing, Sweet Relief Cream for added localized pain relief, or additional organic aloe vera. The rule of thumb concentration is: 50% concentration from the neck upwards, and 70% concentration from the shoulders down, avoiding mucus membranes due to tissue sensitivity. When 60 to 90% DMSO is applied to the skin, warmth, redness, and itching may occur for the first 15 minutes, and this is normal. Do not rub deeply or cover areas where DMSO is applied; it should be allowed to air dry. If using DMSO after bathing, it is recommended to wait 30 minutes to an hour, as the pores on the body are wide open and too much DMSO can be absorbed by the body; this can cause irritation or discomfort.
- DMSO is a very temperature sensitive product. Liquid DMSO can and will crystallize in a cold environment. If this occurs, place or keep the DMSO bottle in a warm (18°C - 20°C) location, and within a few hours, it will go back to liquid form. This will not change the quality or the effectiveness of the product. For faster results, place the bottle in a clean zip lock bag, seal it, and place it in warm water. Under any circumstances, do not microwave it!
- When using DMSO, always make sure to have clean hands and skin. DMSO is a powerful pain reliever and transporter. If you have dirt or anything else on your hands and /or skin, DMSO will take it down to your deep tissue, as far as to the seventh layer into the dermis, and it can cause irritation or discomfort.
- DMSO has a strong sulfur and garlic odor. When applied, a garlic smell can emit from the body and a garlic taste may be tasted in your mouth. This is a normal occurrence. To eliminate this side effect, we recommend taking 1 tbsp. of high quality organic liquid chlorophyll – 3 times a day; or eating 1 cup of spinach – 3 times a day.
- Life Choice DMSO products are packaged in glass containers, which eliminate all possibilities of chemical leeching.
- Recommended book for extended applications, details and information on DMSO: *DMSO - Nature's Healer* by Dr. Walker Morton.
